### Course Description

---

Biochemistry is the study of chemical processes that occur in living organisms and impacts many fields including medicine, biotechnology, pharmacology, agriculture and environmental science. A major in Biochemistry will provide you with an understanding of fundamental concepts in the field, including matter and energy transformation, homeostasis, biological information, evolution, and macromolecular structure and function. The major will prepare you for diverse career paths such as healthcare, public health, pharmaceuticals, food science, agriculture, research, forensics, cosmetics, environment, science writing, patent law, education, and sales. Successful completion of your degree will provide excellent preparation for biotechnology, pharmaceutical industry, graduate school, medical school, dentistry school, veterinary school, law school, and many others. In this course, you will:

- Learn about biochemistry topics covered in major courses
- Learn graduation requirements for a degree in Biochemistry & Molecular Biology/Biotechnology
- Learn about resources available to you to succeed
- Develop a plan for acquiring necessary skills for your future career
- Compare possible career paths in biochemistry
