Course Syllabus: BMB801 – Introduction to Molecular Biology  
Fall Semester 2020   Online!

Course Information
Courses meet live on Zoom MWF from 9:10-10:00 am EST.  
Course documents and archived material are available on D2L.  
Recitations will be held on Tuesdays from 6:00-7:00 pm EST also via Zoom.  
Special review sessions by the instructors may also be arranged periodically depending upon student requests.

Note: Zoom software is supported by MSU and is free to students. The Zoom application can be downloaded from https://zoom.us/download.

Zoom Meeting Information
The meeting ID for the MWF lectures is: https://msu.zoom.us/s/92551882139  
Password is: 979925
The meeting ID for the Tuesday recitation is: https://msu.zoom.us/j/99571294179  
Password is: 777812

Contact Information for Course Instructors
Dr. Bill Henry           lectures 1-19           henryrw@msu.edu
Dr. David Arnosti (Course Coordinator) lectures 20-42 arnosti@msu.edu
Noah Goff (Teaching Assistant)                goffnoah@msu.edu

We like to use first names for students and instructors; as graduate students you are now peer scientists-in-formation. You may indicate your preferred name (and pronouns, if desired) on your Zoom box to help people address you correctly, e.g. “Bill”, “Noah”, “David (he/his)”.

Course Description & Overview
Welcome to Biochemistry & Molecular Biology 801! The focus of this course is on cellular information management - DNA metabolism and gene expression. We will emphasize “What” we know and “How” we know it for a series of related topics. We also hope that you will come to appreciate “Why” these topics were pursued in the first place by some of the leading scientists who forged critical breakthroughs.

Required Textbook & Course Materials
No course textbook is required. Relevant topics will be covered in the instructors’ notes and slide presentations available on D2L.

Recommended Texts & Other Course Materials
Most course information for this course is derived from the primary literature. For additional background, we recommend Molecular Biology of the Gene (Watson, Baker, Bell, Gann, Levine & Losick) Molecular Biology of the Cell (Alberts, Johnson, Lewis, Raff, Roberts & Walter) or Lewin’s Genes (Krebs, Goldstein & Kilpatrick). We will provide lecture notes, outside papers,
old exams, and class recordings online via D2L. Course lecture notes will be available online for students to read before class. We will aim to have notes available at least a week in advance, so that students can read material before class – an important step for “flipped classrooms”.

To access course material:

* Sign on to “D2L” [http://D2L.msu.edu](http://D2L.msu.edu)
* Log on with your account name before the @ (e.g. arnosti) + password
  (the course is titled: FS20-BMB-801-001 Molecular Biology)
* Features
  1. Course Syllabus
  2. Course Announcements
  3. Background information on molecular biological techniques
  4. Lecture Notes (PDF format)

*Note: For further studies of the primary literature, you will need to obtain your own copies of papers. As an MSU student, you can access most journals that are behind paywalls by going through the MSU library and entering the journal name: [https://libguides.lib.msu.edu/eresources/ejournals](https://libguides.lib.msu.edu/eresources/ejournals)*

**Study Groups**

Although you will doubtlessly find it useful to review concepts on your own, we strongly encourage all students to also participate in student-organized study groups to discuss more general themes and approaches. We will facilitate introductions to your peers throughout the semester to make getting to know people, and getting together outside of class, easier.

**Course Objectives & Expectations**

The long-term mission of this course is to enable students to cognitively participate in the modern scientific enterprise. We will accomplish this goal by (1) enhancing your scientific knowledge base and (2) highlighting intellectual approaches to the scientific process. After completion of this course, we expect students should be able to understand biological processes at a molecular level and communicate these details to an audience in a clear and concise manner. We additionally expect that students will begin to apply these principles to novel situations reflective of the scientific exploration process. The material presented in this course is expected to provide a solid foundation for success with comprehensive preliminary exams, expected in the near future for many of you.

**Grading**

Grades will be based on two oral exams (50%) and written assignments (45%), as well as credit for participation (5%). Two of the written assignments will be crafted in teams with collaboration among team members encouraged. These assignments will follow the general format for a NIH R01 grant submission, but in a much briefer format (5 page max). Details of the written assignments will be provided at a later date. The topic(s) for the individual oral exams will be derived from topics discussed in the class, and the content covered in the written assignments. We will test the student’s knowledge of relevant material, as well as ability to interpret and design experiments. The purpose of using these diverse types of assessment is to provide practice for the second year qualifying exam.
**Technical Assistance**
If you need technical assistance at any time during the course you can:

* Visit the MSU Help site at [http://help.msu.edu](http://help.msu.edu)
* Visit the Desire2Learn Help Site at [http://help.d2l.msu.edu](http://help.d2l.msu.edu)
* Call the MSU IT Service Desk at (517)432-6200, (844)678-6200, or e-mail at ithelp@msu.edu
* Request assistance navigating and requesting instructional design help: [https://tech.msu.edu/service-catalog/teaching/instructional-design-development/](https://tech.msu.edu/service-catalog/teaching/instructional-design-development/)
* Browser/mobile support for D2L can be found at: [https://documentation.brightspace.com/EN/brightspace/requirements/all/browser_support.htm](https://documentation.brightspace.com/EN/brightspace/requirements/all/browser_support.htm)
* Guide for internet speed: [https://broadbandnow.com/guides/how-much-internet-speed-do-i-need](https://broadbandnow.com/guides/how-much-internet-speed-do-i-need). For most courses, 25 Mbps should work. If there is no mandatory video component, then students may be able to interact with the course with a slower connection. However, some course activities require access to "high speed" internet.

**Additional Policies**
1. Attendance & Absences - We will record the classes (not breakout room sessions, however) so that all students can access the presentations and discussions through D2L. We strongly encourage students to attend all class sessions, and a small percentage of the grade will reflect participation. If for any reason you are not able to attend a class, we understand! No need to provide a doctor’s certificate in case of illness.
2. Academic Integrity/Cheating Policy - Your written exercises will represent the efforts of your team; as with all scholarly documents, plagiarism is not acceptable ([https://msu.edu/unit/ombud./academic-integrity/plagiarism-policy.html](https://msu.edu/unit/ombud./academic-integrity/plagiarism-policy.html)). If you have concerns about the integrity of any work in the class, you can discuss with any of the instructors, or TA, or anonymously by contacting the MSU ombudsperson ([https://ombud.msu.edu](https://ombud.msu.edu)).
3. Accommodations for Persons with Disabilities - The instructors are here to serve you, and make this course a stepping stone in your professional development. Whether or not you have an officially recognized disability, we will seek to find accommodations for any obstacle to your success.
4. Learning Continuity Statement - If something arises that will interfere with attending on an ongoing basis, please let the instructors know, and we will work to find a solution. In case a student cannot complete the course for medical or other reasons, it is possible to obtain a deferral, allowing completion at a later date.
5. Course Continuity Statement – Bill Henry will supervise the first part of the course, and David Arnosti the latter portion. We will both be present for all classes, and in case of instructor illness will cover for each other. Our TA Noah Goff will also be presenting two lectures, as well as weekly recitations, and will provide backup for the instructors. Communications about the course should normally be directed at the TA and/or the lead instructor for that portion of the course.

Midterm Oral Exam (Week of October 12-16, times Arranged)

| Lecture 20 | Oct 19 | Arnosti | Reverse transcriptase and retroviruses*                             |
| Lecture 21 | Oct 21 | Arnosti | Recombination I*                                                   |
| Lecture 22 | Oct 23 | Arnosti | Recombination II**                                                  |
| Lecture 23 | Oct 26 | Arnosti | Overview of transcription and methods*                             |
| Lecture 24 | Oct 28 | Arnosti | RNA polymerases, bacterial initiation**                             |
| Lecture 25 | Oct 30 | Arnosti | The lac operon: a half-century of innovation*                       |
| Lecture 26 | Nov 2  | Arnosti | Termination and attenuation**                                       |
| Lecture 27 | Nov 4  | Arnosti | Class discussion**                                                 |
| Lecture 28 | Nov 6  | Arnosti | Transcription: eukaryotes and achaea*                               |
| Lecture 29 | Nov 9  | Arnosti | Eukaryotic RNA polymerases and basal factors**                      |
| Lecture 30 | Nov 11 | Arnosti | Transcriptional activation and repression I*                        |
| Lecture 31 | Nov 13 | Arnosti | Transcriptional activation and repression II**                      |
| Lecture 32 | Nov 16 | Arnosti | Genome-wide and developmental regulation*                          |
| Lecture 33 | Nov 18 | Arnosti | Capping and polyadenylation**                                       |
| Lecture 34 | Nov 20 | Arnosti | mRNA splicing I*                                                    |
| Lecture 35 | Nov 23 | Arnosti | mRNA splicing II**                                                  |
| Lecture 36 | Nov 25 | Arnosti | mRNA turnover**                                                     |
| Lecture 37 | Nov 30 | Arnosti | miRNA, piRNA, and RNA interference*                                 |
| Lecture 38 | Dec 2  | Arnosti | Translation*                                                        |
| Lecture 39 | Dec 4  | Arnosti | The ribosome; structure and function**                              |
| Lecture 40 | Dec 7  | Arnosti | Alternative translational codes**                                   |
| Lecture 41 | Dec 9  | Arnosti | ‘omic analysis of translation*                                       |
| Lecture 42 | Dec 11 | Arnosti | Translational regulation**                                          |

Final Oral Exam (Week of December 14-18, times Arranged)
Key for Henry and Arnosti Lectures
* - Full lecture days (typically Monday (Henry) or start of new topic (Arnosti))

Topics for Full Lecture
1. Centromeres & Telomeres
2. DNA Topoisomerases
3. DNA Replication - Introduction
4. DNA Replication – Licensing
5. DNA Repair – Recombination Repair Pathways (Goff)
6. Mitochondrial DNA Replication
7. Reverse transcriptase and retroviruses*
8. Recombination I*
9. Overview of transcription and methods*
10. The lac operon: a half-century of innovation*
11. Transcription: eukaryotes and achaear*
12. Transcriptional activation and repression I*
13. Genome-wide and developmental regulation*
14. mRNA splicing I*
15. miRNA, piRNA, and RNA interference*
16. Translation*
17. 'omic analysis of translation*

**- Flipped classroom with student preparation required (typically Friday (Henry))

Topics for Flipped Classroom Experience:
1. DNA Structure & Genome Structure
2. DNA Topology
3. ATP-Dependent Chromatin Remodeling
4. DNA Replication
5. DNA Repair
6. Exam Review
7. DNA Modification – CRISPR
8. Recombination II**
9. RNA polymerases, bacterial initiation**
10. Termination and attenuation**
11. Class discussion**
12. Eukaryotic RNA polymerases and basal factors**
13. Transcriptional activation and repression II**
14. Capping and polyadenylation**
15. mRNA splicing II**
16. mRNA turnover**
17. The ribosome; structure and function**
18. Alternative translational codes**
19. Translational regulation**

(The format for the rest of the lectures not marked with an asterisk will be determined later!)
Due Dates for Written Assignments – upload to D2L before class (Total 45%)

Note: the 2.5% questions are short answer, paragraph-length exercises.

The 15% assignments are 3-5 page ONE SPECIFIC AIM proposals that loosely follow the flow of an NIH grant proposal, but much compressed. They are not intended to take enormous amounts of time and effort, but rather to give you a flavor for the types of thinking and writing that you will use later in your second-year qualifying exam proposals.

1. Chromatin Remodeling – due Sept 18, 2020 ................................................................. (2.5%)
2. DNA Repair – due Oct 2, 2020 .................................................................................. (2.5%)
3. mini-NIH Proposal 1 (DNA Replication) - due Oct 5, 2020 ............................................. (15%)
4. Mitochondrial DNA Replication – due Oct 19 ............................................................... (2.5%)
5. Recombination - due Oct 23 .......................................................................................... (2.5%)
6. Transcriptional termination – due November 2 ............................................................... (2.5%)
7. mRNA splicing – due November 23 ................................................................................ (2.5%)
8. mini-NIH Proposal 2 (Gene expression) - due December 7th ....................................... (15%)
