

A postdoctoral position is available immediately in Polly Hsu's Lab at Michigan State University to study translational regulation in plant responses to the environments. The candidates should have a background in plant molecular biology. Strong interests in either stress response or translational regulation is preferred. Applicants should either have received a PhD (within the past two years) or be completing their PhD within six months. Only applicants with at least one first-author peer-reviewed research paper will be considered. This position is renewed every year dependent on the satisfactory progress and lab funding availability. To learn more about the Hsu lab:
